

25 May 2026

Hello,

Project Update – Wastewater Infrastructure Upgrade – Lawrie Street/Cudmore Terrace, Henley Beach

We'd like to provide you with an update on the critical wastewater works in your area.

Work was temporarily paused while we looked at ways to reduce noise from the temporary bypass pump. This pump is needed to keep wastewater services running while the existing system is offline and must operate 24 hours a day. It is located in the pump station on the corner of Hill Street and Cudmore Terrace.

We've now made some improvements to help reduce noise. An additional noise barrier wall has been installed, and a smaller pump will be used during overnight hours.

We are undertaking functional testing of this new pumping arrangement from **Tuesday 26 May for approximately 48 continuous hours**. We will be monitoring sound levels during this time, including during overnight hours on Tuesday 26 May and you may see or hear us briefly at the front of your property. We will take care not to disturb you. If testing is successful, this new pumping arrangement will be activated from week starting 1st of June and stay in place for approximately three months while we recommence laying the new pipework along Lawrie Street. Weather and site conditions can cause delays.

As a reminder, after the three months of installing the new wastewater pipe along Lawrie Street, we'll move on to upgrading the pump station. The pump and some new pipework on Cudmore Terrace will be required again for a much smaller period when the pump station upgrade is completed.

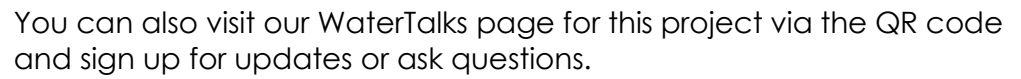

What you can expect

- Some noise will continue from the pump, but it should be reduced.
- Staff will be monitoring the temporary bypass pump and pipework 24/7 so you may see our presence on site.
- Current traffic arrangements on Lawrie Street and Cudmore Terrace will remain in place.
- No parking will be permitted on both sides of Lawrie Street during this time.
- Access to your driveway will be maintained.

We appreciate your patience and understanding while we carry out these critical works.

Keeping you updated

If you have any questions or would like more information, please contact us on **1300 729 283** (option 1) or email project@sawater.com.au. We will continue to keep you updated as the project progresses.
