

Water experts join Eyre Peninsula Desalination Project

Global infrastructure company ACCIONA has partnered with us to prepare the design for the Eyre Peninsula Desalination Project. ACCIONA is a global leader in renewable energy and sustainable infrastructure solutions and led the design and delivery of the Adelaide Desalination Plant.

The design includes developing where and how key elements of the plant will be constructed, a process that is informed by stakeholder engagement and environmental and scientific assessments.

A detailed concept design will be submitted as part of the project's development application lodgement in early 2024, which will be open for public consultation.

Subject to required approvals, construction is expected to begin in mid-2024, with the first water to be delivered from the end of 2025.

The below graphic demonstrates current activities underway, with work taking place concurrently, for example, marine science studies, design, and local engagement.

Design process
